# Free Roulette Strategies You Can Use

Anyone that plays roulette wants a strategy that works, this goes without saying. However, how do you know if a roulette strategy works or not? Most people say that it is one that can win in the long term, but sadly there are not many of these knocking about.

In fact, at some point, all roulette strategies will work, but the vast majority of them will ultimately fail. This is due to the house edge that exists, no bets can overcome this, no matter what combination or pattern you use.

There aren't actually that many different strategies that you can use because there are only so many mathematical sequences you can use. Most commonly you will find the Martingale, and more or less everyone that has ever played the game has tried this one.

You simply need to bet on a colour and after each loss you need to double your bets until you get a winning one. This is effective for a short amount of time, like with most strategies, but your bank roll will eventually be wiped out with a losing run. What you need is a realistic profit goal, and never play for too long at once. A [free roulette strategy](#) site can guide you through the ups and downs of these kinds of systems in more detail.

There are lots of systems out there that you pay for too, but these are all just copies of one another. Normally they are just sleeper systems which are already available for free around the web. You should only buy one of these systems if they have a money back guarantee, and only remember to test them out completely before using the with real money.

Finally, you need to remember that roulette is a game of chance, there are no guarantees that you can win at all. Always play with money that you have no problem parting with, and before you use the strategies for real, test them out.
